

Tambla

Intelligent Workforce Solutions
for **Insights**

Tambla Insights can provide analysis of your data at your fingertips in easy to understand, interactive dashboards

Role Based Analytics.

Ensure staff at all levels of your organisation have timely access to the information they need - where and when they need it. Web based dashboards provide executives, operational managers and leaders across your business with information tailored to their role - providing WFM analytics for key areas like Overtime, Absence and leave Budget Compliance, Skills shortages and Scheduling.

Actionable Insight

Define the metrics that are critical to your business and present them in a way that is both simple to display and easy to interpret. Replace your reliance on distributed reports that provide no clear call to action with interactive visualisations that get right to the heart of problems and enable action to be taken to avoid unnecessary expense, risk or compliance issues.

Integrate Operational Data

Whether you start with out-of-the-box common dashboards or opt for more highly configured analytics displays, integrating data from external sources provides insight into your workforce data in line with other operational measures. For example, understanding the relationship between your schedule and your visitors or customers, measuring your budget against actual revenue numbers, or applying weight to critical areas such as absence skills can help to provide both cause and effect.

Compliance

Drill into the detail and promote compliance across your business in critical areas - from long term staffing requirements, shift, leave and break management, attendance trends through to budget and cost management or staff skills and shortages. When people can see the issues in real-time, they can act accordingly.

Informed Decisions

Interactive and actionable data elements provides your operations staff, at all levels, realtime insight into any area of your workforce planning cycle and promotes informed decisions based on actual data.

Operational Management

Incorporate thresholds and alerts to insure managers across your business are aware of issues as they arise and provide the mechanisms to enable them to take corrective action and make improvements with timely adjustments.
